

Your Local SHED MARKET

The first thing you need to know about us is that we do not have a 'standard range' of sheds as we do not order anything for a building until you order the building from us. Every item is then custom made and cut to suit your exact requirements. Basically if you need any rectangular shaped, gable roofed building prefabricated from steel, we have the ability and proven track record to fulfil your requirements.

If you buy a shed or garage and are not happy with what you have received, you cannot trade it in and start again. This is why we ask you to seriously consider what you get for your money.

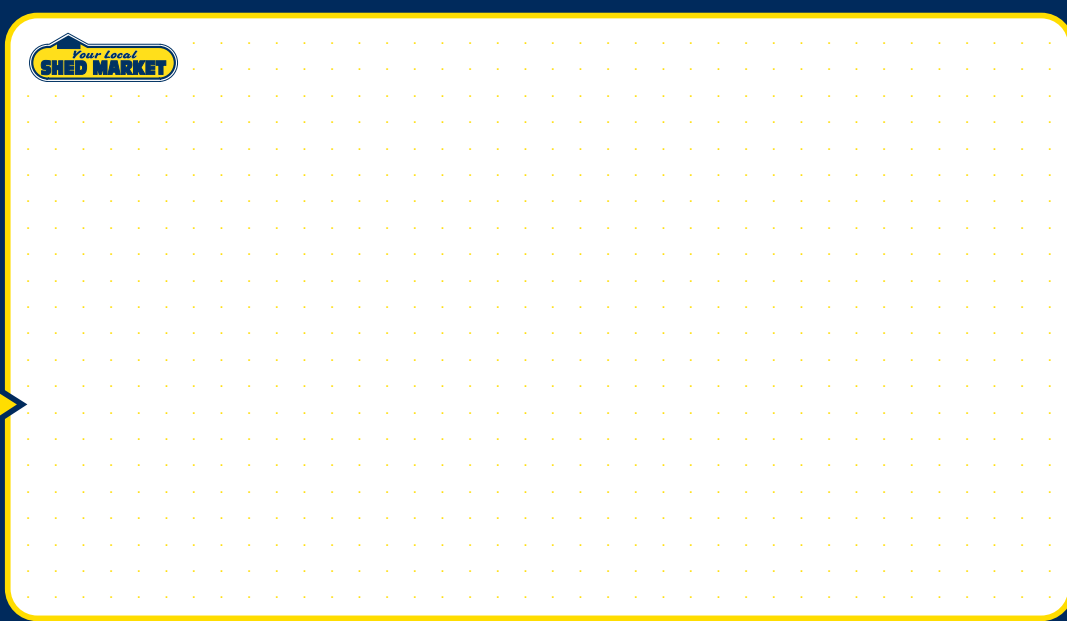

Before you start shopping for any shed or garage, forget your budgets and think carefully about what it is you would like your final building to be if money was no object and roughly sketch it out.

We can then work together to design a building that will fit your budget without compromising what it was you ultimately set out to achieve.

Your building can be supplied in either kit form, constructed by us to a complete 'turn key' status or anywhere in between to suit your budget.

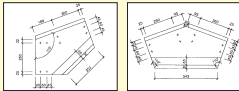

Design Your Own Shed

Design your own shed with our easy to use grid. Simply sketch your design onto the grid above and draw a line from the yellow circles onto your sketch to indicate materials and accessories you would like to include on your design.

Our Unique Standard Features

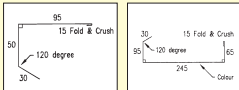

Large fully bolted galvanised connection brackets with strengthening folds for superior support used throughout the entire building.

Sample diagrams of connection brackets.

All materials used are in compliance with manufacturer's specifications and standard building practices, to guarantee your manufacturer's warranty. e.g. purlin and girt spacings, use of gutter brackets, etc.

Sample diagrams of standard flashings.

All openings are finished with our customised flashings to completely cover all sheet edging and galvanised framework.

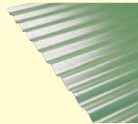

All accessible flashing edges are finished with a double safety fold to strengthen and leave no sharp edges. Large capacity downpipes, ensure fast and effective dispersal of rainwater.

Cladding

CORRO PROFILE

The famous Australian corrugated profile. Corro is equally at home with traditional and contemporary designs. Available on walls as well as the roof for a true heritage style appearance.

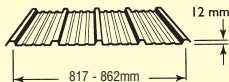

HIGH RIB PROFILE

A modern, ribbed profile with subtle fluting in the pans to provide strength and long spanning capabilities. It is available in two base metal thicknesses, equally suitable for domestic, industrial and commercial applications.

LOW RIB PROFILE

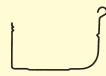

Has a small trapezoidal rib, and is intended for walling. It is an economical wall cladding, designed for garages and sheds.

Rainwater

HI FRONT QUAD GUTTER

The traditional "D" shape of the QUAD (or "D") gutter perfectly compliments our range of roofing and walling products to give that professional, finished look.

SQUARE TYPE GUTTER

This gutter is concealed-fixed, it is supplied slotted. Neat, square line with plenty of rain carrying capacity.

Doors

Our 'personal access' (PA) doors are constructed from a single piece of colourbond flashing material with sturdy horizontal and diagonal support members on the inside and edges. A high quality lock set and sturdy butt hinges are also supplied as standards. All PA. doors are a nominal 2100mm high and at 820mm wide they will easily accommodate the passage of wheelbarrows, wheelchairs, etc.

Windows

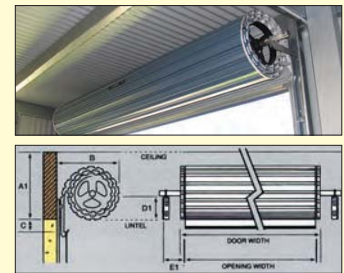

Windows come in a large choice of colours with the choice of sizes being 600, 900 or 1200mm high and 600, 900, 1200, 1500 or 1800mm wide. Sliding glass doors come a nominal 2100mm high and either 1800 or 2400 wide.

Options available:

- Flyscreens
- Internal Security Bars
- Full Security Grills (incorporating flyscreens)

Roller Doors

Available as domestic grade up to a maximum opening size of a nominal 3000mm high or wide. Above either of these sizes industrial grade doors can go to a maximum opening size of a nominal 5000mm high or wide.

Options available: Electronic Remote Openers Removable Mullions

Insulation

Insulation is manufactured from glass wool creating a flexible, thermally rated building blanket giving condensation control and an excellent solution to dramatically reducing unwanted noise created by rain and hail. We always install insulation with heavy duty galvanised support mesh to help improve its efficiency.

Vents & Skylights

Standard grade industrial fibreglass sheeting provides protection against damage from hail up to 20 mm in diameter accompanied by winds up to 100 km/hr.

The free spinning head rotates in the lightest of winds to extract hot and stale air from within the roof cavity.

Self Drilling Screws

ITW Buildex is Australia's leading manufacturer and supplier of self drilling screws.

Buildex is so confident that it can guarantee the highest quality and performance of its fasteners that it has backed it up with the **Buildex Warranty** - an industry first.

The **Buildex Warranty** guarantees peace-of-mind against screw damage, roof failure and expensive call backs.

ShankGuard is a revolutionary patented design feature specifically developed by Buildex to protect fastener shanks from scratching and scouring.
